Analytical data

The following pages contain the original data (compositions in weight % of oxides and reported weight % errors, ± 1 sigma) obtained from SEM-EDS analysis of glass and paint samples:

- (a) Samples from Sherborne Abbey w1 panel 2d
- (b) Samples from All Saints Church Emscote n7 tracery panel
- (c) Various unfired paint and flux samples.

The data were obtained using an FEI Sirion XL-30 Scanning Electron Microscope (SEM) equipped with a Thermo Noran Ultra-Dry Energy Dispersive X-Ray Spectrometer (EDS) and NSS Spectral Analysis System v.2.3 (Thermo Fisher Scientific). Imaging and analysis were carried out at an accelerating voltage of 20 kV with standardless quantification.
